"Scumbling" relates to that description of painting in which portions of the last coat are removed in order to expose part of the coat beneath. Glazing is a system of painting whereby a thin, transparent coat of one color - which is usually bright - is glazed or painted over another color which is a solid and is often relatively sombre in hue. Due to the actual mounted samples this book is highly useful for teaching purposes.

A handbook about the mental and physical preparation and detailed planning required for a successful trip to the North or South Pole. In this guide, veteran explorer and polar pioneer Dixie Dansercoer outlines the particular considerations and requirements for all kinds of polar expedition: short self-guided trips, guided Last Degree expeditions and long-haul expeditions, self-financed or sponsored, to the Arctic or the Antarctic. Illustrated with first-hand accounts of hazardous crossings, tricky decision points and encounters with polar bears, as well as evocative expedition photography, sections cover motivation and limitations, understanding the cold, preparations, what to take, travel during the day and camp organisation at night, as well as hazards from polar bears to exploding stoves and whiteout to frostbite. For newcomers in need of guidance, it will help them begin their mental and physical preparation for surviving in such extreme environments. For returning explorers, there is plenty of information on equipment, techniques and experiences to compare and contrast. Also includes a glossary of polar terms and a recommended daily polar regime.

"Concise and engaging, Michael Bloom's book is for anyone who has ever uttered the phrase, "But what I really want to do is direct."--BOOK JACKET.

Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Measurement of key parameters is an essential part of interpreting ultrasound scans and differentiating normal anatomy from pathology. Trainee radiologists and ultrasonographers often find it difficult to gain a good appreciation of such measurements. This book is a user-friendly handbook that can be used in day-to-day practice. It is made up of a series of ultrasound images with accompanying explanatory line drawings together with all key measurements. Normal variants are given together with ranges for features that change during development. There is also a list of key references for each criterion. Coverage is in line with examination requirements making it particularly suitable for trainee radiologists and ultrasonographers.

Media contact is a fact of business life. And yet this is the only book on the market that focuses exclusively on getting the best out of contact with journalists. It's written by a journalist, about journalists, and based on a long-established and successful media-training course. Circulating copies of this book around key executives would be a far cheaper and more cost-effective alternative to hiring media-trainers. Being able to handle the media effectively can be a significant

career advantage. Doing it badly can be damaging both to the career and to the company. This book is a practical guide to handling media contact. It starts at first contact with a journalist and goes right through to discussing whether, and if so how, to follow up an interview. The book looks at print, radio, television and online journalism. There's a chapter on crisis management and one on interviewees' legal rights. A key feature of the book is that it focuses on what journalists want, why they want it, and how to give it to them in a way that achieves favourable media coverage. Can I quote you on that? describes techniques for handling a variety of interviews successfully, from the visit to your office by a trade journalist, through expected and unexpected telephone interviews, via calls from newspapers and magazines, radio interviews, phone-ins and discussion programmes, to the range of television experiences, including the camera crew at the office, the studio-based interview and the remote studio. There's a chapter on effective interview preparation and an emergency page for reference if the interview is imminent. This book is designed to convey an understanding of how journalists work and how to work with them for mutual benefit. There are answers to a range of frequ

This reference manual contains information on the most suitable procedures for the analysis of agricultural materials. It describes the analysis of soils and composts, plant materials, feeds, plant components (e.g. cellulose, lignin, trace elements), fertilizers, and biological substances. The book is designed as a laboratory sourcebook, complete with useful Internet addresses, and contains over 60 different practical methods. Each method is described by a step-by-step approach, and contains details of apparatus required, chemical reaction equations, formulae and calculations, and meticulous descriptions of experimental results. Most methods use standard equipment and instruments commonly found in the practical lab. The aim is that scientists with little experience in analytical techniques should be able to safely carry out these procedures and obtain acceptable results.

This book is a distillation of twenty years of practical experience of the high pressure liquid chromatography (HPLC) process. Deliberately steering clear of

complex theoretical aspects, this book concentrates on the everyday problems associated with the technique, making it perfect for frequent use in the laboratory and for those in the pharmaceutical, agrochemical and biotechnology industries for the analysis and purification of drugs, small molecules, proteins and DNA.

Organicum: Practical Handbook of Organic Chemistry focuses on the theory, laboratory practice, and aspects of technical use related to organic chemistry. This book discusses the standard apparatus for organic reactions, heating of inflammable liquids, performance of a simple distillation, and partition chromatography in separating columns. The time factor in organic chemical reactions, distribution of the electron density in organic molecules, and synthesis of ethers from alkoxides or phenoxides are also elaborated. This text likewise covers the mechanism of electrophilic aromatic substitution, quinones from aromatic hydrocarbons, and reduction of carbonyl compounds by means of complex hydrides. Other topics include the reaction with ammoniacal solution of a silver salt, preparation of the dimedone derivatives, and saturated aliphatic

hydrocarbons. This publication is suitable for chemists and researchers conducting work in organic chemistry.

Analytical chemists in the pharmaceutical industry are always looking for more-efficient techniques to meet the analytical challenges of today's pharmaceutical industry. One technique that has made steady advances in pharmaceutical analysis is supercritical fluid chromatography (SFC). SFC is meeting the chromatography needs of the industry by providing efficient and selective testing capabilities on the analytical and preparative scale. The supercritical fluid mobile phase, consisting mainly of CO₂, facilitates cost reduction costs and helps the industry in meeting green chemistry standards. This book provides a comprehensive overview of the use of SFC in pharmaceutical analysis.

Supercritical Fluid Chromatography reviews the use of SFC in drug-discovery applications and describes its application in drug development. When a drug is developed and brought to market, it is tested many times for impurities and degradants, enantiomeric purity, and analytical and preparative isolations—it is tested during discovery and development and for under-regulated and unregulated methodologies. The book describes the use of SFC for each of these applications and discusses more in-depth topics, such as the use of SFC in mass spectrometric and polarographic detection. The book also sheds light on the role of SFC in drug development from natural products and the advancement of SFC with new technologies and its use in pilot-scale operations as a chromatographic technique.

Teeming with practical examples, this guide promotes an integrated approach for carrying out a case study. With a background emphasis on how to ensure the reliability and validity of results, the different steps of this approach are detailed: assessing the appropriateness of a case study; preparation; selecting cases; data collection, analysis and interpretation; and reporting results

Antibodies protect us from a wide range of infectious diseases and cancers and have become an indispensable tool in science—both for conventional immune response research as well as other areas related to protein identification analysis. This second edition of *Making and Using Antibodies: A Practical Handbook* provides clear guidance on all aspects of how to make and use antibodies for research along with their commercial and industrial applications. Keeping pace with new developments in this area, all chapters in this new edition have been revised, updated, or expanded. Along with discussions of current applications, new material in the book includes chapters on western blotting, aptamers, antibodies as therapeutics, quantitative production, and humanization of antibodies. The authors present clear descriptions of basic methods for making and using antibodies and supply detailed descriptions of basic laboratory techniques. Each chapter begins with introductory material, allowing for a better understanding of each concept, and practical examples are included to help readers grasp the real-world scenarios in which antibodies play a part. From the eradication of smallpox to combating cancer, antibodies present an attractive solution to a range of biomedical problems. They are relatively easy to make and use, have great flexibility in applications, and are cost effective for most labs. This volume will assist biomedical researchers and students and pave the way for future discovery of new methods for making and using antibodies for a host of applications.

This book discusses in a systematic manner the role of separation in HPLC, the types and characteristics of stationary phases and of mobile phases used in this technique, as well as other factors influencing the separation. The selection process of stationary and mobile phase for a specific separation is described as related to the physico-chemical characteristics of the molecules to be separated and of their matrix. All these subjects are discussed from the point of view of the new developments in HPLC. The book also includes a part presenting the practice of modern HPLC as necessary for applications, particularly related to the analysis of pharmaceutical and biological samples, food and beverages, environmental samples, etc. Gives a clear presentation of notions and concepts Discusses key parameters in HPLC separation Includes modern developments in HPLC Describes interrelation between various HPLC features (solvent pressure, separation, detection) Includes a large number of references. The book is intended to serve as a practical resource for microbiology, genetics and biometry. The book helps to gain conceptual and application of knowledge on such subjects and provides an engaging entree into the related topics addressed in different university syllabus. It also serves as a practical guide for both academic and industrial labs where they want to start.

Natural Products, broadly defined as high value chemical entities derived from plants or microbial sources, have been known and exploited for many years. In recent years, as the need for higher potency and predictability of such products has increased, more sophisticated concentration and isolation procedures have been developed. With the passage of time, such procedures have been rationalized in terms of scientific principles but, in general, theory has followed behind practice, leading at any given time to an absence from the literature of methods which are truly state of the art. *Downstream Processing of Natural Products: A Practical Handbook* is a highly practical manual which addresses this issue, and guides researchers and industrial workers through the many potential pitfalls of natural product isolation. The contributors to this volume, all of whom have wide practical experience in this field, present state-of-the-art techniques and observations. The three main stages of natural product purification are covered, namely product release, capture, and purification, and both proteins and secondary metabolites are covered. There is special mention of the requirements of the regulatory authorities with respect to Good Manufacturing Practice, and practical guidance is given on scale-up procedures and process scale instrumentation. *Downstream Processing of Natural Products: A Practical Handbook* will provide essential practical guidance to all those involved in natural product isolation. This includes academic and industrial researchers, postgraduate students and technicians working in the biotechnology field. Designed for researchers seeking new ways to explore their field and media professionals aiming to extend their practice, this filmmaking handbook shows you how to plug in to issues at the intersection of documentary cinema and ethnography. Exploring the unique potential for filmmaking to describe lifeworlds and the role of video editing in generating new ideas about human experience, it offers practical and theoretical advice for those making their first films. Based on over twenty years of teaching and industry experience, *Filmmaking for fieldwork* aims to inspire the development of core skills in camera use, sound recording and editing that can be applied to sensory, observational, participatory, reflexive and immersive modes of storytelling. Written for a multi-disciplinary audience, this book covers all stages necessary to produce a documentary film, from conception through to preparation, production, editing and distribution.

Excerpt from The Chemistry of Gas Manufacture, Vol. 1: A Practical Handbook on the Production, Purification, and Testing of Illuminating and Fuel Gas, and on the Bye-Products of Gas Manufacture The extensive revision and enlargement of this handbook, which the advances in the Gas Industry made imperative as soon as the Second Edition was exhausted, practically precluded its continued publication as a single volume. The manufacture and use of Acetylene, to which a chapter had been devoted in that edition, could no longer be adequately or appropriately dealt with in such a manner, and a new handbook on "Acetylene" was, therefore, written by Mr. F. H. Leeds, in collaboration with the undersigned, and published in 1903. The revision of the rest of this work, as projected, entailed the re-writing of the major part of it, and in order neither to delay publication unduly nor to make too bulky a volume, it was decided to publish as a first volume the portion treating of the Materials and Processes of Gas Manufacture before the completion of the revision of the remainder of the book. The volume, published accordingly in 1904, has been revised throughout, and several pages of fresh matter have been added for the present new edition. A second volume, covering the "Testing and Use of Gas," is in course of preparation. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
