The right to self-determination is renowned for its lack of clear interpretation. Broadly speaking, one can differentiate between a 'classic' and a 'romantic' tradition. In modern international law, the balance between these two opposing traditions is sought in an attempt to contain or 'domesticate' the romantic version by limiting it to 'abnormal' situations, that is cases of 'alien subjugation, domination and exploitation'. This book situates Russia's engagement with the right to self-determination in this debate. It shows that Russia follows a distinct approach to self-determination that diverges significantly from the consensus view in international state practice and scholarship, partly due to a lasting legacy of the former Soviet doctrine of international law. Against the background of the Soviet Union's role in the evolution of the right to self-determination, the bulk of the study analyses Russia's relevant state practice in the post-Soviet space through the prisms of sovereignty, secession, and annexation. Drawing on analysis of all seven major secessionist conflicts in the former Soviet space and a detailed study of Russian sources and scholarship, it traces how Russian engagement with self-determination has changed over the past three decades. Ultimately, the book argues that Russia's approach to the right of peoples to self-determination should not only be understood in terms of power politics disguised as legal rhetoric but in terms of a continuously assumed regional hegemony and exceptionalism, based on balance-of-power considerations.

The International Textbook of Diabetes Mellitus has been a successful, well-respected medical textbook for almost 20 years, over 3 editions. Encyclopaedic and international in scope, the textbook covers all aspects of diabetes ensuring a truly multidisciplinary and global approach. Sections covered include epidemiology, diagnosis, pathogenesis, management and complications of diabetes and public health issues worldwide. It incorporates a vast amount of new data regarding the scientific understanding and clinical management of this disease, with each new edition always reflecting the substantial advances in the field. Whereas other diabetes textbooks are primarily clinical with less focus on the basic science behind diabetes, ITDM's primary philosophy has always been to comprehensively cover the basic science of metabolism, linking this closely to the pathophysiology and clinical aspects of the disease. Edited by four world-famous diabetes specialists, the book is divided into 13 sections, each section edited by a section editor of major international prominence. As well as covering all aspects of diabetes, from epidemiology and pathophysiology to the management of the condition and the complications that arise, this fourth edition also includes two new sections on NAFLD, NASH and non-traditional associations with diabetes, and clinical trial evidence in diabetes. This fourth edition of an internationally recognised textbook will once again provide all those involved in diabetes research and development, as well as diabetes specialists with the most comprehensive scientific reference book on diabetes available.

How students get the materials they need as opportunities for higher education expand but funding shrinks. From the top down, *Shadow Libraries* explores the institutions that shape the provision of educational materials, from the formal sector of universities and publishers to the broadly informal ones organized by faculty, copy shops, student unions, and students themselves. It looks at the history of policy battles over access to education in the post-World War II era and at the narrower versions that have played out in relation to research and textbooks, from library policies to book subsidies to, more recently, the several "open" publication models that have emerged in the higher education sector. From the bottom up, *Shadow Libraries* explores how, simply, students get the materials they need. It maps the ubiquitous practice of photocopying and what are—in many cases—the more marginal ones of buying books, visiting libraries, and downloading from unauthorized sources. It looks at the informal networks that emerge in many contexts to share materials, from face-to-face student networks to Facebook groups, and at the processes that lead to the

consolidation of some of those efforts into more organized archives that circulate offline and sometimes online—the shadow libraries of the title. If Alexandra Elbakyan's Sci-Hub is the largest of these efforts to date, the more characteristic part of her story is the prologue: the personal struggle to participate in global scientific and educational communities, and the recourse to a wide array of ad hoc strategies and networks when formal, authorized means are lacking. If Elbakyan's story has struck a chord, it is in part because it brings this contradiction in the academic project into sharp relief—universalist in principle and unequal in practice. *Shadow Libraries* is a study of that tension in the digital era. Revised edition of the authors' *Global marketing*, 2015.

The third edition of *International Communication* examines the profound changes that have taken place, and are continuing to take place at an astonishing speed, in international media and communication. Building on the success of previous editions, this book maps out the expansion of media and telecommunications corporations within the macro-economic context of liberalisation, deregulation and privatisation. It then goes on to explore the impact of such growth on audiences in different cultural contexts and from regional, national and international perspectives. Each chapter contains engaging case studies which exemplify the main concepts and arguments.

Arbitrage—the trading practice that involves buying assets in one market at a cheap price and immediately selling them in another market for a profit—is fundamental to the practice of financial trading and economic understandings of how financial markets function. Because traders complete transactions quickly and use other people's money, arbitrage is considered to be riskless. Yet, despite the rhetoric of riskless trading, the arbitrage in mortgage-backed securities led to the 2008 financial crisis. In *Capturing Finance* Carolyn Hardin offers a new way of understanding arbitrage as a means for capturing value in financial capitalism. She shows how arbitrage relies on a system of abstract domination built around risk. The commonsense beliefs that taking on debt is necessary for affording everyday life and that investing is necessary to secure retirement income compel individuals to assume risk while financial institutions amass profits. Hardin insists that mitigating financial capitalism's worst consequences, such as perpetuating class and racial inequities, requires challenging the narratives that naturalize risk as a necessary element of financial capitalism as well as social life writ large.

This book provides a rich and unique longitudinal account of content and language integrated learning (CLIL). The chapters report on the findings from a large-scale, three-year research project undertaken at senior high school level in Sweden. The ecological perspective, with quantitative and qualitative methods, gives voice to both learners and teachers, as well as being an excellent critical example of how such longitudinal research might be carried out. Through emic and etic approaches, the book provides insights into language learning outcomes, both with regard to the target language English and the majority language Swedish; learner motivation among CLIL and non-CLIL students; effects of extramural exposure to English; issues in relation to assessment

in CLIL and much more. As a whole, the book offers an unprecedented overview of learner outcomes and detailed insights into the comparison of CLIL and non-CLIL education. While it is embedded in the Swedish context, the nature of this study means that it has strong implications on an international basis.

This book examines the shifting portrayal of the nation in school textbooks in 14 countries during periods of rapid political, social, and economic change. Drawing on a range of analytic strategies, the authors examine history and civics textbooks, and the teaching of such texts, along with other prominent curricular materials—children's readers, a required text penned by the head of

state, a holocaust curriculum, etc.. The authors analyze the uses of history and pedagogy in building, reinforcing and/or redefining the nation and state especially in the light of challenges to its legitimacy. The primary focus is on countries in developing or transitional contexts. Issues include the teaching of democratic civics in a multiethnic state with little history of democratic governance; shifts in teaching about the Khmer Rouge in post-conflict Cambodia; children's readers used to define national space in former republics of the Soviet Union; the development of Holocaust education in a context where citizens were both victims and perpetrators of violence; the creation of a national past in Turkmenistan; and so forth. The case studies are supplemented by commentary, an introduction and conclusion.

Shortly after the syllabi are posted, and long before the beginning of the term, interlibrary loan departments at academic libraries will have filled or rejected innumerable textbook requests. While it would be unwise if not impossible to buy and circulate every textbook at a college or university, there are many academic libraries who are selectively adding textbooks to their collections. And the practice seems to be gaining momentum. In this volume, the Association for Library Collections and Technical Services (ALCTS) and editor Chris Diaz gather case studies that pull together creative approaches and best practices for print textbook reserve programs. This book discusses such topics as results and analysis from a detailed survey of a state university's core-course textbook reserve program; funding sources for starting or piloting a program; using aggregated enrollment, grade, and textbook cost data to identify "high impact" courses; identifying course-related books that are in the library's collection or fit an existing collection policy; workflow for using bookstore data with ILS and purchasing systems; and using LibGuides and Google Sheets to publicize textbook holdings, and how a back-end database supports discovery for students and reporting for reserves staff. A textbook reserve program can be one way of helping students who are struggling with the high cost of textbooks, and this book spotlights a variety of examples that can be used as models.
