The purpose of this small book is to teach art students right-hand facts on the painting of landscape. Having had long experience in this branch of art, I feel confident I can suggest certain rules and give advice that will help them in avoiding mistakes and eliminate many difficulties so common with beginners in all lines of work. A book of this kind contains many instructive suggestions, it leads toward the proper method of producing varied effects and is actually as compact and good as a book costing several times as much. While an art book cannot make an artist, it can, no doubt, help students in planning their compositions, teach them to differentiate between this method or the opposite method in producing certain effects.

In *What Painting Is*, James Elkins communicates the experience of painting beyond the traditional vocabulary of art history. Alchemy provides a magical language to explore what it is a painter really does in her or his studio - the smells, the mess, the struggle to control the uncontrollable, the special knowledge only painters hold of how colours will mix, and how they will look. Written from the perspective of a painter-turned-art historian, *What Painting Is* is like nothing you have ever read about art.

*Landscapes in Oil* is the first-ever comprehensive guide to classical landscape painting reinterpreted for the twenty-first century.

Drawing from the tradition established by American painters of the Hudson River School--artists like Thomas Cole, Frederic Church, and George Inness--author and painter Ken Salaz reveals great masters' philosophy and methods, updating their approaches for the contemporary landscape painter. Beginning painters are given the basic tools and step-by-step demonstrations, intermediate painters are challenged with unpublished techniques that allow them to break through to the next level, and advanced painters learn to apply their skills under unified theories. *Landscapes in Oil* devotes a chapter to each of the fundamental elements of landscape painting--drawing, value, color, composition, and light quality--and offers critical advice on selecting tools and materials, choosing colors, and structuring your palette for best results. Emphasizing the necessity of plein air drawing and painting, Salaz demonstrates how to translate small, quick studies made outdoors into full-scale studio paintings. He provides detailed step-by-step breakdowns of the creation of four of his own paintings, focusing not only on application but also on the ideas that underpin every decision a landscape painter must make. The scores of landscape masterworks, past and present, that illustrate this book have been carefully chosen for their aesthetic power and because each embodies a specific aspect of the landscape painter's craft. For Salaz, landscape painting is a noble pursuit, and the goal of the landscape artist is not to paint "pretty pictures" but to create compelling images that express human beings' profound connection to nature in all its diversity and grandeur. At a time when classical landscape is enjoying a renaissance in art schools, ateliers, and galleries across North America, this book is an essential resource for beginning and experienced painters alike.

From New York Times best-selling author of the Dinotopia series, James Gurney, comes a carefully crafted and researched study on color and light in paintings. This art instruction book will accompany the acclaimed Imaginative Realism: How to Paint What Doesn't Exist. James Gurney, New York Times best-selling author and artist of the Dinotopia series, follows Imaginative Realism with his second art-instruction book, Color and Light: A Guide for the Realist Painter. A researched study on two of art's most fundamental themes, Color and Light bridges the gap between abstract theory and practical knowledge. Beginning with a survey of underappreciated masters who perfected the use of color and light, the book examines how light reveals form, the properties of color and pigments, and the wide variety of atmospheric effects. Gurney cuts through the confusing and contradictory dogma about color, testing it in the light of science and observation. A glossary, pigment index, and bibliography complete what will ultimately become an indispensable tool for any artist. This book is the second in a series based on his blog, [gurneyjourney.com](http://gurneyjourney.com). His first in the series, Imaginative Realism, was widely acclaimed in the fantastical art world, and was ranked the #1 Bestseller on the Amazon list for art instruction. "James Gurney's new book, Color and Light, cleverly bridges the gap between artistic observation and scientific explanation. Not only does he eloquently describe all the effects of color and light an artist might encounter, but he thrills us with his striking paintings in the process." --Armand Cabrera, Artist

She explains color mixing clearly so that oil and acrylic painters will learn how to put color theory into action. They'll see how they can paint any subject with the six basic colors plus white and gray.
