

Russia Oil Refining And Gas Processing Industry Russia Oil

Russia Oil and Gas Exploration Laws, Regulation Handbook Volume 1 Strategic Information, Regulations, Contacts
This book provides more comprehensive materials and discussion on environmental impact of the offshore oil and gas industry than any other single source currently available. Specifically, multi-disciplinary perspectives are given, addressing worldwide advances in studies, control, and prevention of the industry's impact on the marine environment and its living resources. Unique to this text are the data on environmental aspects of Russian offshore oil and gas developments presented by the leading expert on the problem. The author considers the main impact factors of the offshore activity and outlines conditions providing the balance of interests for the oil industry and fisheries. Special attention is given to the ecotoxicological and biogeochemical characteristics of oil and gas hydrocarbons in the marine environment. Based on all presently available information, specific environmental requirements for discharges and seawater quality are substantiated. Final chapters summarize strategic principles of environmental protection and ecological monitoring in relation to the offshore oil and gas activity. Appendix includes Russian standards of Maximum Permissible Concentrations (MPC) and Approximate Safe Impact Limits (ASIL) for about 200 chemicals used in oil and gas production.

Russia Company Laws and Regulations Handbook - Strategic Information and Basic Laws

The restructuring of Russia's legal and regulatory frameworks in the past decade have created new conditions for investment and business ventures, offering both new opportunities and challenges to the prospective investor. Russia Tax, Law & Business Briefing: 2006 provides guidance on tax and legal issues investors should consider when evaluating a possible company acquisition, starting a business or entering into a joint venture or strategic alliance in Russia. Coverage includes: *An analysis of Russia's overall economy in the context of its strong oil and gas sectors, including the macroeconomic effects of changes in oil prices; *The restructuring and resulting creditworthiness of Russian banks five years after the 1998-1999 financial crisis; *A discussion of the performance of the Russian ruble against the dollar and the euro, and the resulting impact on Russia's trade balance and inflation rate; *Drugstore chain 36.6's successful launching of the first IPO in Russia by a retail company, and the second domestic IPO in the country's history; and *The prospects for project financing in Russia's fossil fuels sector, as well as other restructuring and privatization developments in the energy market. As with all WorldTrade publications, Russia Tax, Law & Business Briefing: 2004 is written by leading practitioners in the region. Top law firms and ratings companies offer commentary and analysis concerning the current status of the banking, energy, intellectual property, labor, trade, and real estate sectors.

Published in association with the Stockholm International Peace Research Institute.

Russia Investment and Business Guide - Strategic and Practical Information

Russia Executive Government Encyclopedic Directory VOL 1 2012

Oil and Gas explores the business and politics of this complex industry from a regional perspective. This book combines theory, practice and a range of international case studies to provide a comprehensive overview of energy management. This book is an edited collection, bringing together well-known specialists from Russia, Japan, Western Europe and the USA, providing data about the Russian hydrocarbons sector, its size, economic significance, and taxation. It also offers data about the growth of the Stabilization Fund. In addition, it analyses the role of the hydrocarbons sector in Russia's post-1998 economic boom, drawing attention to the contribution of remittances to Russia of the proceeds of raw material exports. With respect to international political economy, 'Russia's Oil and Natural Gas' points out that Russia today, with its large energy exports, helps solve the problem of domestic energy shortages which plague many countries. In this way, Russia is currently a major contributor to world stability and the welfare of the energy importers.

Russia Oil Refining and Gas Processing Companies Handbook

Introduces the most important aspects of the oil industry and offers cogent and up-to-date information about the countries, companies, and people who shape the contemporary history of oil.

In No Standard Oil, environmental policy expert Deborah Gordon examines the widely varying climate impacts of global oils and gases, and proposes solutions to cut greenhouse gas emissions in this sector while making sustainable progress in transitioning to a carbon-free energy future. The next decade will be decisive in the fight against climate change. It will be impossible to hold the planet to a 1.5o C temperature rise without controlling methane and CO2 emissions from the oil and gas sector. Contrary to popular belief, the world will not run out of these resources anytime soon. Consumers will continue to demand these abundant resources to fuel their cars, heat their homes, and produce everyday goods like shampoo, pajamas, and paint. But it is becoming more environmentally damaging to supply energy using technologies like fracking oil and liquefying gas. Policymakers, financial investors, environmental advocates, and citizens need to understand what oil and gas are doing to our climate to inform decision-making. In No Standard Oil, Deborah Gordon shows that no two oils or gases are environmentally alike. Each has a distinct, quantifiable climate impact. While all oils and gases pollute, some are much worse for the climate than others. In clear, accessible language, Gordon explains the results of the Oil Climate Index Plus Gas (OCI+), an innovative, open source model that estimates global oil and gas emissions. Gordon identifies the oils and gases from every region of the globe-along with the specific production, processing, and refining activities-that are the most harmful to the planet, and proposes innovative solutions to reduce their climate footprints. Global climate stabilization cannot afford to wait for oil and gas to run out. No Standard Oil shows how we can take immediate, practical steps to cut greenhouse gas emissions in the crucial oil and gas sector while making sustainable progress in

transitioning to a carbon-free energy future.

Russia Business and Investment Opportunities Yearbook Volume 2 Leading Export-Import, Business, Investment Opportunities and Projects

Belarus relies on Russia for about 85% of its total energy needs, while Russia needs Belarus' oil and gas pipelines to export its supplies to Western Europe. How will energy exports from Russia and Belarus' transit capabilities impact Western Europe if this interdependent relationship ends, either through political changes in Belarus or if Russia ends its energy subsidies to Belarus?

This report looks at transit, infrastructure and investment issues and analyzes both the state of the current infrastructure, as well as the possibilities this transit opens to Western investors, particularly as the Yamal Pipeline nears completion. In addition, it looks at the current conflict between Belarus and Russian investors for control of the country's gas transit system and oil refineries. This series of reports establishes for the first time the confluence of Russian foreign policy with the acquisition of foreign energy assets by Russian entities. Nine specific country profiles focus on the oil, gas, electricity and nuclear power industries. Each report written by an author of international standing, explains how Russian foreign energy downstream mergers and acquisitions are transpiring to consolidate the new Russian empire.
